

Statement of Support

Clean Water Indiana

- Indiana is losing almost 46 tons of soil annually due to wind/water erosion at a cost of \$275 million ... negatively impacting our soil and water quality and the quality of life for all Hoosiers.
- Local Soil and Water Conservation Districts have the ability to work across political boundaries to engage stakeholders in natural resources planning to find solutions to this issue.
- Clean Water Indiana provides funding for conservation programs!

We Support Clean Water Indiana funding in the 2010-11 biennium budget!
